Arthropod Management and Landscape Considerations in Large-Scale Agroecosystems

For large-scale agroecosystems, patterns of pest population increases (graded increases or abrupt outbreaks) and declines (graded suppression or abrupt crashes) vary considerably and are influenced by factors within crop fields and across broader landscape scales. Better understanding of pest population dynamics and the implications of spatial interactions on the function and development of pest management approaches are the main themes of this important book. The book builds from a 60+ year history of field-based pest management by focusing on the drivers of pest management in large-scale agroecosystems and the landscape-scale processes that affect these drivers and contribute to variation in pest outbreaks and suppression. These drivers include abiotic and biotic influences such as weather, spatial composition and arrangement of landscape elements, and widely applied managed inputs such as planting and crop rotation schedules, crop varietal selection, and land and soil conservation efforts. The book introduces general concepts, opportunities, and challenges of arthropod management in large-scale agroecosystems. The book is essential reading for researchers in applied entomology and ecology and for pest management practitioners.

Current Trends of Insect Physiology and Population Dynamics: Modeling Insect Phenology, Demography, and Circadian Rhythms in Variable Environments

The current eBook collection includes substantial scientific work in describing how insect species are responding to abiotic factors and recent climatic trends on the basis of insect physiology and population dynamics. The contributions can be broadly split into four chapters: the first chapter focuses on the function of environmental and mostly temperature driven models, to identify the seasonal emergence and population dynamics of insects, including some important pests. The second chapter provides additional examples on how such models can be used to simulate the effect of climate change on insect phenology and population dynamics. The third chapter focuses on describing the effects of nutrition, gene expression and phototaxis in relation to insect demography, growth and development, whilst the fourth chapter provides a short description on the functioning of circadian systems as well as on the evolutionary dynamics of circadian clocks.

Landscape Ecological Analysis

Growth in the field of landscape ecology has included the development of methods and results that can be applied to an impressive range of environmental issues. This book addresses a broad spectrum of political, theoretical and applied aspects that often arise in the design and execution of landscape studies. The concepts of geographical scale and hierarchy arising within the confines of landscape ecology are examined, and a series of techniques are presented to address problems in spatial and temporal analysis. This book will provide the reader with a current perspective on this rapidly evolving science.

The People's West Lake examines the Chinese Communist Party's (CCP) efforts to reconfigure Hangzhou's urban space, alter the natural environment in West Lake (Xihu), and refashion the city's culture in post-1949 China. It pieces together five initiatives between the 1950s and the 1970s: the dredging of the lake, the construction of the public park of Watching Fish at the Flower Harbor (Huagang guanyu), the afforestation movement, the development of collectivized pig farming around West Lake, and the two campaigns to remove lakeside tombs. These projects were intended to generate visible and tangible results--a lake with a good depth, a scenic public garden, greener hills surrounding the lake, a growing swine population and rising productivity of fertilizer, and a tourist site cleansed of burial grounds--while also being readily subject to the

Party's propaganda. These initiatives were designed both to achieve economic, cultural, and ecological utilities and to forge and popularize a sense of socialist nationhood. The CCP's endeavor to fundamentally transform the West Lake area also opened up possibilities for both human and nonhuman actors to variously benefit from, get along with, and undermine the political authorities' planning. This book thus emphatically foregrounds and unifies the agency of both humans and nonhuman entities that are not necessarily tied to intentionality, bringing into question the legitimacy of the human/nonhuman binary. Author Qiliang He explores the agency of both humans and nonhumans (including water, microbes, aquatic plants, the park, pigs, trees, pests, and tombs) to affect, deflect, and undercut the CCP's sociopolitical programs, thereby diminishing the efficacy of state propaganda. Highlighting the nonpurposive agency of both actors problematizes the long-held resistance-accommodation paradigm, which presumes the resisters' a priori subjectivities independent of the socialist system, in studying the state-society relationship in the People's Republic of China. Using a project-based approach, *The People's West Lake* gives the nature-human relationship in Mao's China (best known as Mao's "war against nature") historical and cultural specificities to reexamine the PRC regime's central planning and the issues related to it.

Integrated Pest Management (IPM) for Cultural Heritage

An exploration of the lived experience of small-scale organic farmers in New England that unpacks how they balance their ideals with economic realities. In recent years, the popularity of organically grown produce has exploded. In 2014, organic fruits and vegetables accounted for 12% of all produce sales in the United States, with \$39 billion in consumer sales reported for 2015. As a federally recognized niche market within the agricultural mainstream, organic farming is increasingly on display in American grocery stores. Yet the organic food most Americans consume today is produced by an industrial food system at odds with the practices and ideals of small-scale farmers. Taking an ethnographic approach, the fieldwork by Connor Fitzmaurice and Brian Gareau at a small New England organic farm sheds light on how farmers navigate the difficult terrain between practices of sustainability and the economic realities of contemporary agriculture. Drawing on extensive research, Fitzmaurice and Gareau examine the historical context, complexities, and viability of nonconventional organic farming practices: practices that seek to balance ecology and community with the business of agriculture.

The first tourist destinations were primarily consolidated in the early twentieth century. Since then, tourism has undergone significant changes in its economic and social components. Over time, many of these destinations have now come to represent 'mass tourism' and are the subject of many studies on the impacts of tourism and competitiveness policies. The conclusions of these studies point to the need for new perspectives and strategies ranging from adaptation to new contexts to a radical change in targets. Concepts such as 'sustainability', 'nature', 'biodiversity' or 'climate change' have now been added to the tourism industry with varying degrees of knowledge and skill. These offer a great opportunity to improve a model of tourism previously oriented towards business and the institutional rhetoric of "sustainability" – a fact now recognised by tourists as representing the negative effects of conventional tourism. Management of these innovations should include among its aims environmental education and orient visitors towards awareness and respect for sustainability even outside their leisure time. To this end, the tourist needs to be made aware of all those involved and their commitment to managing the destination, as enjoying the territory should be based upon minimising the socio-ecological impacts of tourism, and on motivating nature conservation and participation of local populations in both these goals, as well as in the economic benefits obtained. The challenge entails the destination finding a good balance between economic and cultural benefits, landscape conservation and tourist satisfaction. This fifth volume of the Tourism Today Series presents a collection of papers addressing the how to manage these types of uses at a variety of destinations and in multiple contextual realities. These edited papers were selected from those presented at different international conferences organised by the Wessex Institute of Technology. They address important issues related to tourism as a tool for development which will give a better understanding of some of the current challenges.

Congressional Record

Tourism, internationally, is the largest economic sector both in terms of earnings and number of people employed. Understandably, the economic advantages have led to the active promotion of tourism by governments and other institutions, often independent of the consequences on the environment. The challenge is to balance the need for a low impact on the environment and local culture, while helping to generate income, employment and the conservation of local ecosystems. Sustainable tourism has to be both ecologically and culturally sensitive. This book contains papers presented at the Third International Conference on Sustainable Development, held in Malta. The Meeting focused on empirical work and case studies from around the world, and the book offers new insight and best practice guidance for supporting sustainable tourism. Adopting a multi-disciplinary approach, this book examines the practice of sustainable tourism from global travel trends through to destination and site management. Of interest to scientists, practitioners and policy makers, the topics covered in this volume include: Art, culture and nature; Climate change and tourism; Coastal issues; Community involvement; Ecological issues; IT and tourism; Modelling and estimates; Risk and safety; Rural tourism; Tourism and protected areas; Tourism as a factor of development; Tourism as a tool of urban development; Tourism impact; Tourism strategies.

Draft Environmental Impact Statement, Proposed Land and Resource Management Plan, Gifford Pinchot National Forest

In the past decade, the growing realization that biodiversity and human wellbeing are inextricably linked has led to the adoption of numerous environmental policies. The concept of the Green Economy has gained particular attention as an economic system where growth is possible within environmental limits. The preservation of ecosystem services and the halt of biodiversity loss are identified as key pillars of the Green Economy. Despite the concept's momentum there is still no clear understanding of how biodiversity fits within a Green Economy. In the current debate, biodiversity is rarely acknowledged in economic sectors other than agriculture, forestry, fisheries and tourism, and when it is acknowledged biodiversity and its conservation feature more as buzzwords than as concrete and tangible components of the Green Economy. This book aims to identify, understand and offer pragmatic recommendations of how biodiversity conservation can become an agent of green economic development. This book establishes ways to assess biodiversity's contributions to the economy and to meaningfully integrate biodiversity concerns in green-

economy policies.

Organic Futures

This collection elucidates the complexity of living politics in the 21st century, considering how self-help groups draw on shared regional traditions, and how they adapt their actions to the diverse formal political environments in which they operate. It considers the nexus between ideas and action in a world where the conventional 'right-left' divide has a decreasing hold on the political imagination. Examining grassroots self-help actions as responses to everyday life problems, it argues that whilst action may be initiated by encounters with ideas that come into the community from outside, often the flow of cause and effect works in the opposite direction. Focusing on countries both politically dynamic and with long-standing historical and cultural connections - China (including Inner Mongolia), Japan, Taiwan and Korea – this book fills a significant gap in the literature on social movements, demonstrating that survival itself is a political act.
